

Supply Chain Consultants

Supply Chain Consultants (SCC) was founded by a group of supply chain practitioners who came out of the chemicals industry. The company knows and understands the process manufacturing world inside and out, and has the real world experience necessary to solve supply chain problems. Over the years, SCC has helped manufacturers (both process and discrete) drive business value with their supply chain planning. For more information visit our web site at www.supplychain.com.

Supply Chain Consultants has experience in both commercial and industrial glass manufacturing. These carefully inspected bottles are used to package medicines.

Zemeter supply chain software is used for planning and forecasting by some of the largest chemical manufacturers in the world.

Headquarters

- Supply Chain Consultants
- 5460 Fairmont Drive
- Wilmington, DE 19808

Marketplace

Zemeter software is applicable to any manufacturing environment and easily integrates with ERP (SAP, Oracle, JDEdwards, Microsoft, JDE, BAAN) and most legacy systems. Zemeter software tools are in use in the chemical, food processing, industrial and commercial glass, industrial fabrics, and semiconductor industries.

About Supply Chain Consultants

Supply Chain Consultants (SCC) delivers strategic business solutions that enable clients to gather, process and share information across the extended supply chain. SCC solutions combine years of real world experience in the areas of sales and operations planning (S&OP), collaborative planning, demand management, inventory management, production planning,

scheduling and distribution.

Founded in 1993, SCC was a pioneer in the integration of demand planning with production planning by developing a software solution now used in more than 150 global supply chain planning applications. SCC capitalized on its advanced supply chain planning knowledge in 2001, with the introduction of Zemeter, an end-to-end, Microsoft-based solution for supply chain planning. Zemeter provides collaborative decision support to operations, sales and logistics end-users, by equipping them to understand customer demand patterns, monitor inventory health, balance supply and demand, and schedule production.

As an analytical tool, Zemeter provides reporting and analysis of supply chain performance. Users can slice and dice demand and inventory data, measure forecast accuracy, track S&OP performance, and monitor metrics critical to the organization. Zemeter serves as an early warning system when metrics are trending out of line with corporate expectations.

SCC is making major inroads into the supply chain management marketplace. Zemeter software is used in some of the world's largest corporations, including Corning, Akzo Nobel, INEOS, ANADIGICS, Hexion Chemicals, Sunsweet Growers, CIV Corporation (Brazil), and Terra Industries.

Customer of SCC, Sunsweet Growers' 825,00-square-foot plant in Yuba City, CA., is the largest dried fruit processing facility in the world.
